IDENTIFIERS	*California

ABSTRACT

College-going rates of recent California high school graduates for three public segments of California (Fall 1974 through Fall 1979) and for accredited independent colleges and universities (1977 through 1979) are reported. Gains and losses experienced in various counties are examined in light of statewide trends. The ethnic distribution of high school graduates in 1979 is compared with the distribution of first-time freshmen in the University of California, the California State University, and the community colleges, for men and women separately. The flow of transfer students from community colleges to the University and to the State University is examined to determine whether there were decreases since the mid-1970's. A comparison of the ethnic distribution of transfer students in Fall 1979 with that of community college students generally is also shown. Results indicate, among others, that: (1) the college-going rate for recent graduates of California high schools was higher in 1979 than in 1978; (2) gains made by women in the late 1970's are significant, particularly in enrollment of freshmen at the state universities; and (3) ethnic group freshmen enrollment, other than Hispanic, is greater than their distribution among high school graduates. Hispanics are underrepresented. Statistical charts and graphs are included. (Author/PJM)

COLLEGE-GOING RATES IN CALIFORNIA: 1979 UPDATE (A SUMMARY)

BACKGROUND

This is the third in a series of annual reports on the college-going rates of recent California high school graduates. Rates for the three public segments--the University of California, the California State University and Colleges, and the California Community Colleges--have been obtained for Fall 1974 through Fall 1979; for accredited independent colleges and universities, for the last three years. In each instance, rates have been obtained for each California county with at least 150 high school graduates each year. Beginning in 1977, rates have been computed for men and women separately. The ethnicity of both high school graduates and first-time freshmen in the public segments of higher education became available for the first time in 1979, for use in comparing the college-going behavior of the various ethnic groups. 1/

This report also presents updated information about the flow of transfer students from the Community Colleges to the University and the State University. Transfer data for a three-year period--1977 through 1979--have been obtained for each Community College district, with a statewide summary dating back to 1965. The ethnicity of the Community College transfer students also became available for the groups which transferred in Fall 1979. Information also became available concerning Community College transfers to independent California colleges and universities in Fall 1979.

A major purpose of the report was to identify trends in college-going rates during the six-year period which ended in Fall 1979, and to examine the relationships between gains and losses experienced in the various counties, in light of statewide trends. A second purpose was to compare the ethnic distribution of high school graduates in 1979 with the distributions of first-time freshmen in the University, the State University, and the Community Colleges, in each county and statewide, and for men and women separately. Another purpose of the study was to find out whether the flow of transfer students from Community Colleges to the University and the State University had decreased still further from the mid-1970s, and to compare the ethnic distributions of transfer students in Fall 1979 with that of Community College students generally.

1/ Technical Appendices are available from the Commission which include:

1. Sources of data in the tables and graphs;
2. Limitations of the data;
3. College-going rates by California counties, and by year, sex, and ethnic group; and
4. Numbers of Community College transfer students by district, college, year, and ethnic group.

The scope of the study was limited by a lack of information about the enrollment of recent California high school graduates in private postsecondary schools which do not grant degrees. The inclusion of such students in the analysis would probably increase significantly the overall participation rate in postsecondary education, particularly in urban areas. Two other gaps in information available for analysis were numbers of California high school graduates (1) enrolled in colleges and universities in other states, and (2) receiving formal occupational training offered under other auspices, for example, adult education programs of unified school districts and CETA programs. Thus, the college-going rates computed in this study are underestimates of the percentage of young people enrolling in some type of postsecondary education after high school graduation.

COLLEGE-GOING RATES FOR FIRST-TIME FRESHMEN

To obtain college-going rates, the number of first-time freshmen 19 years of age and under was divided by the total numbers of June 1979 graduates of day high schools, both public and private, for each segment and county, and statewide. These rates, expressed as percentages, were judged to be the best possible estimates of college-going rates in California for recent high school graduates, in the absence of longitudinal studies of high school graduates. Total number of first-time freshmen reported by the various segments in 1979 were, of course, considerably larger than those in the age groups for whom the college-going rates have been computed. The former included the increasing numbers of students who postponed enrolling in college for several years after high school graduation, as well as graduates of high schools in other states and from foreign countries. The difference between total first-time freshmen and those used in computing college-going rates was largest for the Community Colleges, where as many as 50 percent of the first-time students were older than 19 years of age when they entered college, and smallest for the University.

Statewide college-going rates are displayed in Table 1 for a six-year period for each public segment (1974 through 1979), and for a three-year period for the independent colleges and universities (1977 through 1979).

TABLE 1

STATEWIDE COLLEGE-GOING RATES FOR
RECENT HIGH SCHOOL GRADUATES
1974-1979

Year	Number of High School Graduates	Percentage Enrolling as Freshmen in UC	CSUC	CCC	Total	Independent	Grand Total
1974	289,714	5.1%	7.6%	41.3%	54.0%	---	---
1975	293,941	5.3	7.5	43.1	55.9	---	---
1976	289,454	5.1	7.8	41.7	54.6	---	---
1977	285,360	5.2	8.0	43.3	56.5	3.6%	60.1%
1978	283,841	5.5	8.4	41.4	55.3	3.4	58.7
1979	278,548	5.8	8.7	42.1	56.6	3.4	60.0

The period showed a steady decline in the total number of high school graduates since 1975, accompanied by a gradual, overall increase in the percentage of students enrolling in a public college or university after graduating from high school. The percentages enrolling in the University and the State University both increased steadily during the six-year period, but were far short of the percentages eligible for freshman admission. Changes in the Community College rate included both increases and decreases between 1974 and 1979, with the lowest rate found for 1974 and the highest for 1977, prior to the passage of Proposition 13 in June 1978. The rate increased between 1978 and 1979 but did not reach the previous high of 43.3 which had been obtained for 1977. Other factors which might explain the fluctuations in the Community College rate were (1) the inclusion in certain years of high school dropouts enrolled as first-time freshmen and high school students enrolled concurrently in Community College classes, and (2) a shift to the University and the State University of some students who would have entered a Community College as freshmen in the past.

When the rate for first-time freshmen in independent colleges and universities is added to those obtained for the public segments, the total college-going rate for recent high school graduates in Fall 1979 reached 60 percent. The Community Colleges enrolled almost five times as many first-time freshmen under the age of 20 as any other segment of California higher education. Expressed another way, 70 percent of the recent high school graduates in California higher education in Fall 1979 were enrolled in the Community Colleges, 14 percent in the State University, 10 percent in the University, and about 6 percent in independent colleges and universities. It seems

clear that the percentages of young people enrolling as freshmen has been increasing slowly during the six-year period ending in 1979, particularly in the University and the State University, at a time when the number of high school graduates has been declining significantly.

Differences Among the Counties--Examples of differences among the largest counties in college-going rates for 1979 are displayed in Figure 1. Eight large counties with total rates of at least 64 percent in 1979 were Los Angeles, Orange, Contra Costa, San Francisco, Santa Barbara, Marin, Monterey, and Napa. At the other extreme, six counties with at least 1,000 high school graduates in 1979 had total college-going rates below 50 percent. They were San Joaquin, Stanislaus, Santa Cruz, Placer, Humboldt, and Butte.

Variance in the county college-going rates may be explained by several sets of factors which are interrelated in a complex fashion. Geography appears to be important as a source of variance in county college-going rates, for example, proximity to one or more popular campuses of the University and the State University. Demographic factors also appear to be related to county differences in rates, for example, the ethnic distribution of the county population, the percentages with family incomes below the poverty level, and the median level of educational attainment of the adult population.

Sex Differences--A statewide, three-year summary of college-going rates by sex is displayed in Table 2 for the three public segments of higher education.

TABLE 2

PERCENTAGES OF MEN AND WOMEN ENROLLED AS FIRST-TIME FRESHMEN IN EACH PUBLIC SEGMENT OF CALIFORNIA HIGHER EDUCATION (1977-1979)

Segment	Sex	Year 1977	1978	1979
University of California	M	5.4%	5.7%	5.8%
	F	5.0	5.4	5.8
California State University and Colleges	M	7.6	7.7	7.8
	F	8.4	9.0	9.5
Community Colleges	M	43.2	41.1	41.1
	F	43.4	41.6	43.1
Total	M	56.2	54.5	54.7
	F	56.8	56.0	58.4

FIGURE 1

COLLEGE-GOING RATES FOR RECENT HIGH SCHOOL GRADUATES BY COUNTY AND SEGMENT FALL 1979

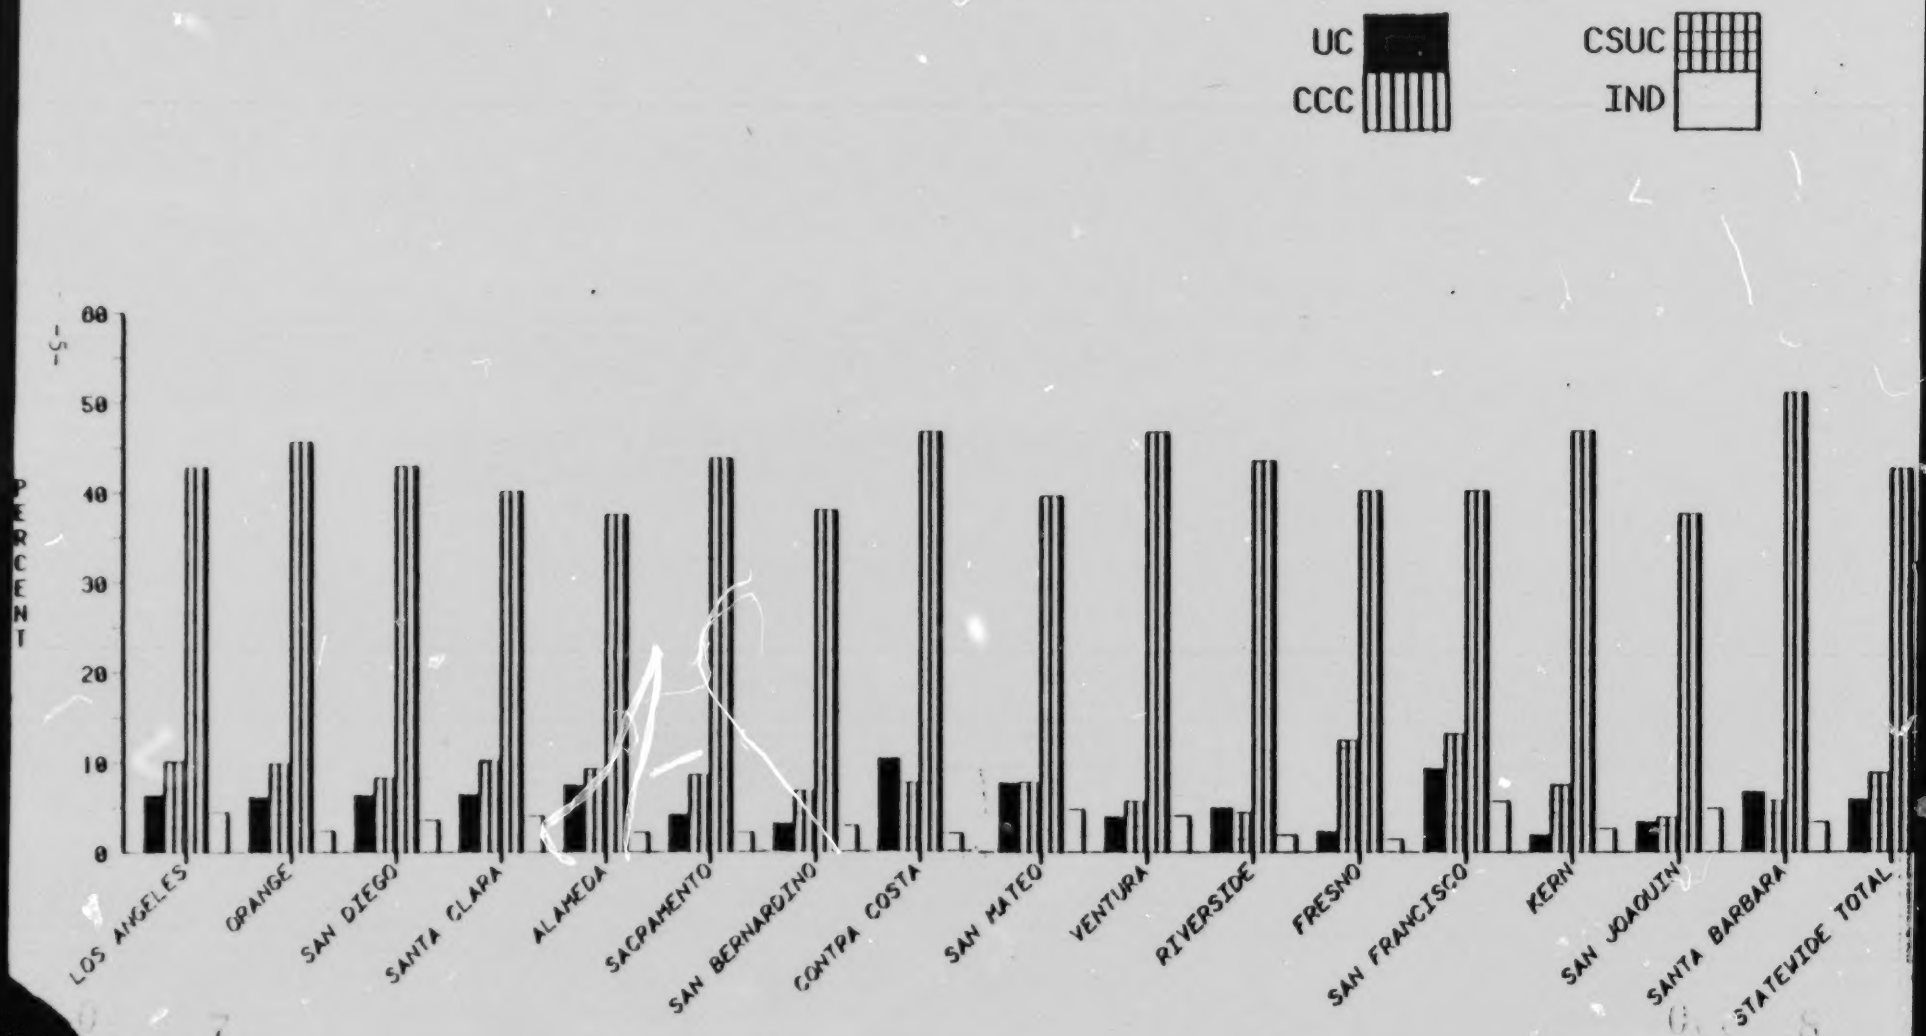

FIGURE 1 (CONT.)

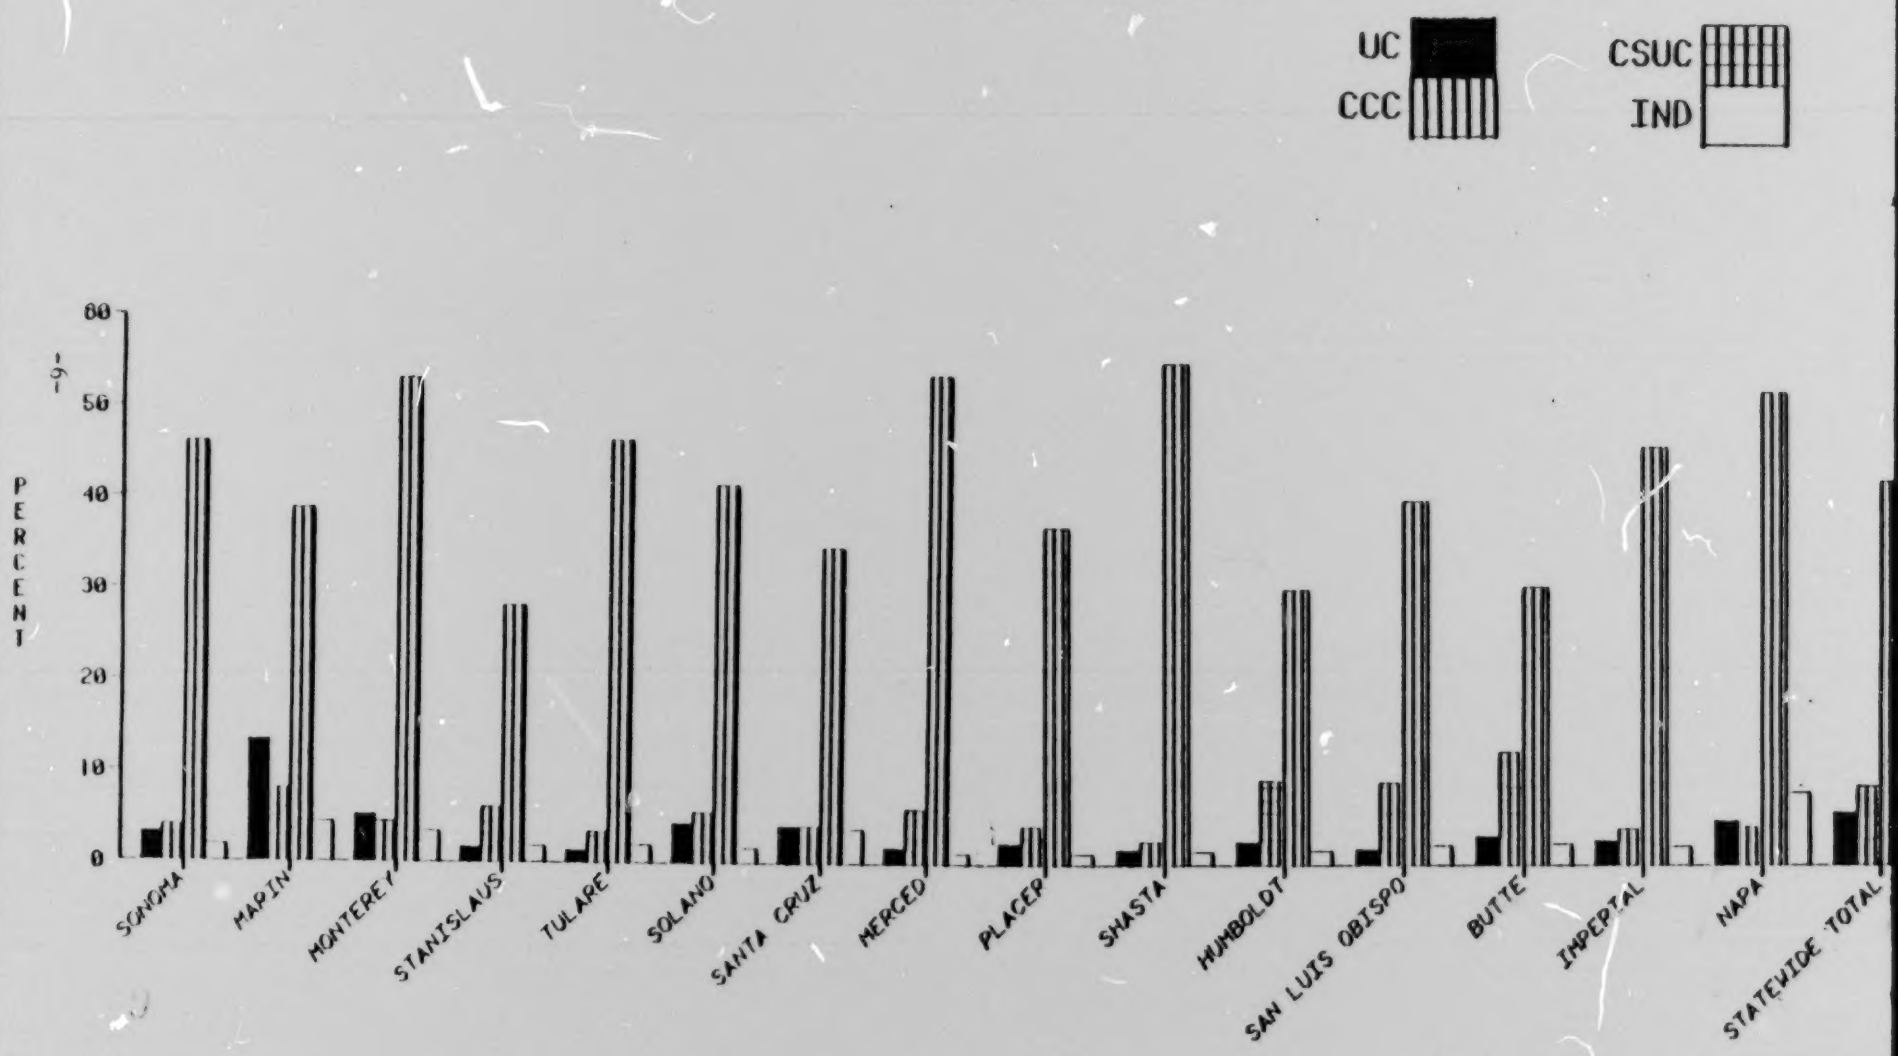
COLLEGE-GOING RATES FOR RECENT HIGH SCHOOL GRADUATES BY COUNTY AND SEGMENT FALL 1970 (CONT.)



In 1979, for the first time, the college-going rate for women was at least equal to that of men in each of the three segments of higher education. In prior years, the University college-going rate for men was found to have been higher than that for women who were recent high school graduates. The rates for women were higher than those obtained for men in the State University and the Community Colleges for 1977 through 1979, with a larger sex difference found for 1979 than for the two previous years.

County college-going rates for men and women did not always reflect the statewide pattern for 1979. For example, the University rate for women high school graduates exceeded that found for men in most of the San Francisco Bay and Sacramento area counties in 1979, but were below the rates for men in a large number of counties in other parts of the State. With the exception of a few counties in which there is no State University campus, the county college-going rates for women were consistently higher than those obtained for men for this segment of higher education in Fall 1979. Sex differences in county rates for the Community Colleges were larger in 1979 than before and not easily explained.

Differences Among Ethnic Groups--A statewide summary of the ethnic distribution of the graduates of public California high schools and the first-time freshmen in the three segments of public higher education in Fall 1979 is given in Table 3, by sex. Graphic representations of the data are displayed in Figures 2 and 3. Distributions were also obtained for the 43 largest California counties. The percentages in Table 3 and the related figures are not comparable to those in the previous tables and figures. The latter--college-going rates--were computed by dividing numbers of first-time freshmen 19 years of age and under by the total number of high school graduates in the same year. This computation of college-going rates could not be performed for the various ethnic groups because of the unknown ethnicity of (1) most private and some public high school graduates, and (2) large numbers of first-time freshmen in the State University. Therefore, the ethnic data have been presented as percentages of high school graduates and first-time freshmen in each of the public segments who were reported to be American Indian, Asian, Filipino, Black, Hispanic, and white, between and among which comparisons could be made. Caution should be exercised in interpreting findings for the State University since no information about ethnicity was available for 30 percent of the first-time freshmen and 37 percent of the Community College transfer students. Three State University campuses reported ethnic data for fewer than half of their first-time freshmen. No reliable data were available from previous years for use in analyzing trends and changes in ethnic distributions.

Of all the ethnic groups, only the Hispanics were less well represented among the first-time students of the public segments

TABLE 3

ETHNIC DISTRIBUTIONS OF 1979 GRADUATES OF PUBLIC CALIFORNIA HIGH SCHOOLS AND FIRST-TIME FRESHMEN IN THE UNIVERSITY OF CALIFORNIA, THE CALIFORNIA STATE UNIVERSITY AND COLLEGES, AND THE CALIFORNIA COMMUNITY COLLEGES, BY SEX

Segment	Sex	Ethnic Groups*						Ethnic Data Missing
		American Indian	Asian	Filipino	Black	Hispanic	White	
High School	M	0.7%	4.7%	0.9%	9.0%	15.0%	69.7%	2.6%
	F	0.7	4.5	1.0	9.5	15.0	69.3	2.4
University of California	M	0.3	13.9	1.6	3.3	6.9	74.0	3.8
	F	0.2	13.0	1.9	5.4	5.9	73.6	3.1
California State Univ. & Colleges	M	1.3	8.0	2.0	6.8	11.4	70.5	29.7
	F	1.3	6.9	2.2	10.4	10.6	68.6	30.4
California Community Colleges	M	1.6	4.7	1.3	10.5	12.8	69.1	5.2
	F	1.6	3.6	1.2	10.8	12.9	69.9	4.6
Total:	M	1.5	6.0	1.4	9.3	12.0	69.8	11.7
	F	1.4	5.0	1.4	10.2	11.9	70.1	11.2
UC, CSUC, and CCC	T	1.4	5.5	1.4	9.8	12.0	69.9	11.4

*The sum of the percentages in each row, exclusive of "Ethnic Data Missing," is 100. Thus, the first entry at the top of the table means that American Indian males comprised 0.7 percent of the male high school graduates in 1979. Similarly, the last entry at the bottom of the table means that whites comprised 69.9 percent of the combined group of first-time freshmen in the three public segments of higher education in Fall 1979.

FIGURE 2

ETHNIC DISTRIBUTION OF HIGH SCHOOL GRADUATES AND FIRST-TIME FRESHMEN IN THE PUBLIC SEGMENTS COMBINED (1979)

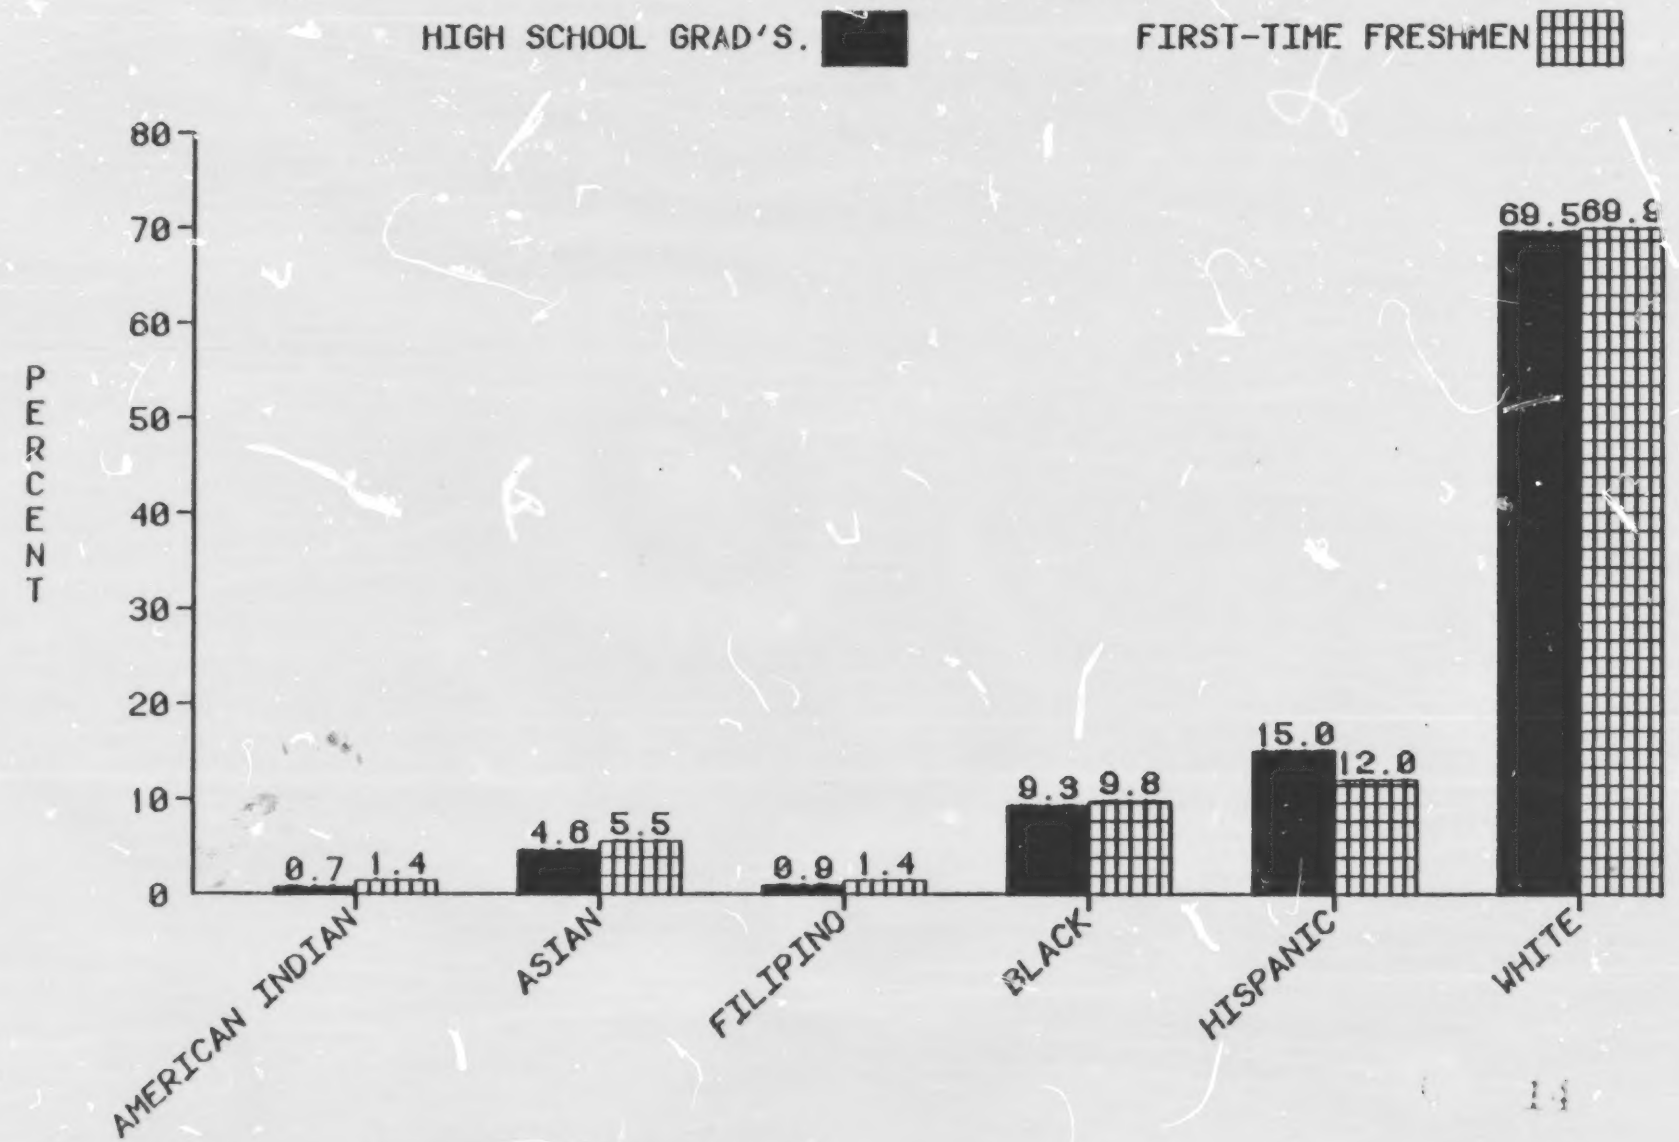


FIGURE 3

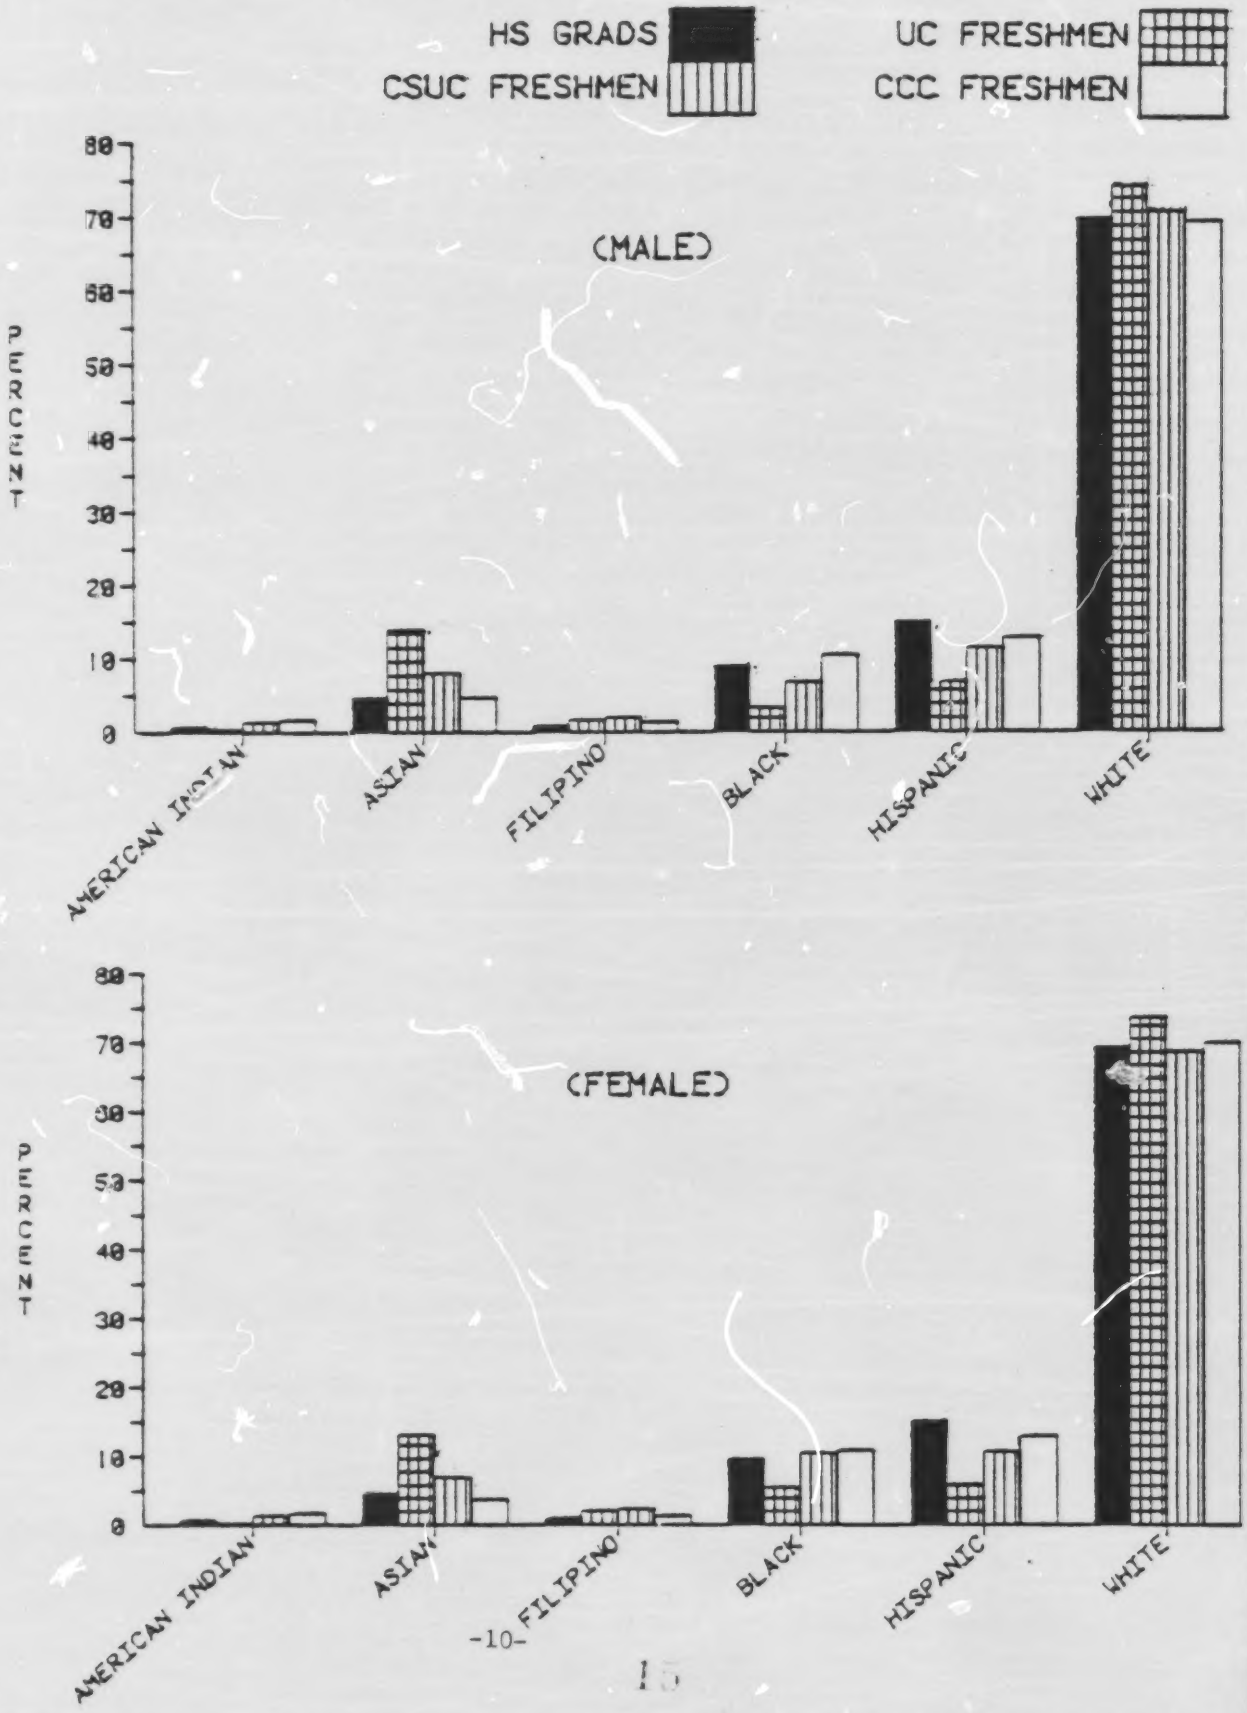
ETHNICITY OF HIGH SCHOOL GRADUATES,
UC, CSUC, CCC FRESHMEN



than in the high school graduating class in the same year. This was true for both men and women although the ethnic distributions for men and women were markedly different. Most notable was higher percentage of Asian men than women among first-time freshmen, and the lower percentage of Black men than women.

Differences among the segments in the ethnic composition of the first-time freshmen are also of interest, compared with the composition of the high school graduate group. The most striking entries in Table 3 are the percentages of Asians among first-time freshmen in the University, in that they are nearly three times as large as the percentages of Asians in the high school graduating class in 1979. The percentage of Asians among first-time freshman ethnic distributions at the State University was also considerably larger than among high school graduates. However, Asians were less well represented among Community College first-time freshmen than in the corresponding groups for the University and the State University. In each segment, the percentage of Asian women was less than that for men.

At the State University, the representation among first-time freshmen of Filipino men and women, and Black women, was greater than their representation among high school graduates. The representation of Black men in the State University group, on the other hand, was significantly smaller than that found for women and also smaller than their representation among high school graduates. In the case of the University, the percentage of Black women is also considerably larger than the percentage of Black men, although both are significantly smaller than the corresponding percentages among high school graduates.

The Community Colleges appear to have enrolled the largest percentages of American Indians, Hispanics, and Black males in 1979. The percentages of Hispanics in the Community College group were smaller than those in the high school group, but larger than those found for the other segments. Although the percentages of men and women in the high school group who were reported to be Hispanic were equal, the percentages of Hispanic men in both the University and the State University groups were larger than those found for Hispanic women. The larger, nearly equal percentages for Hispanic men and women in the Community Colleges produced combined segmental percentages for Hispanics which obscure the sex differences found in the University and State University groups. In any case, the sex differences found for Asians, Blacks, and Hispanics in the University and State University groups would appear to be significant in planning student affirmative action programs.

Numbers and percentages of American Indians enrolled as first-time freshmen in Fall 1979 were relatively small, with the largest con-

centrations of students in the Community Colleges. They comprised less than 1 percent of the high school graduating class in 1979 but between 1 and 2 percent of the distributions of first-time freshmen in the State University and the Community Colleges. Filipinos also comprised less than 1 percent of the high school graduates and more than 2 percent of the first-time freshmen in the State University. The Filipino patterns of enrollment at the freshman level resembled those found for Asians and whites to the extent that their representation among Community College first-time freshmen was less than that for the University and State University groups. The representation of American Indians, Blacks, and Hispanics, on the other hand, was larger in the Community College group than in the University and State University groups.

Differences among the counties were found in the percentages of the various ethnic groups enrolled as freshmen in each segment which appeared to be related to a considerable degree to proximity to a University or State University campus, especially for Blacks and Hispanics. Sex differences which were found in the statewide distributions were also found for most of the large counties, that is, higher percentages for Asian and Hispanic men than women in the University and State University ethnic distributions, together with higher percentages for Black women than men in these same distributions.

COMMUNITY COLLEGE TRANSFER STUDENTS

Numbers of Community College students who transferred to the University and the State University between 1965 and 1979 are shown in Table 4 and Figure 4. Numbers could not be expressed as rates of transfer because no information was available concerning the numbers of Community College students who would be eligible for or interested in transferring into the University or the State University. Rates based on gross numbers of Community College students would be relatively meaningless. Community College students who were not eligible for freshman admission to the State University on graduation from high school, can become eligible for admission as transfer students by earning a minimum of 56 semester units of transfer credit with a grade-point average of at least 2.0 (C). University transfer requirements for students who would not have been eligible for admission as freshmen are somewhat more restrictive in terms of transfer grade-point average (2.4) and the need to make up subject differences incurred in high school.

Between 1978 and 1979, there was an overall decrease of 4.5 percent in the number of students transferring from the Community Colleges to the University and the State University--an 8.7 percent decrease in University transfer and a 3.6 percent decrease in State University

TABLE 4

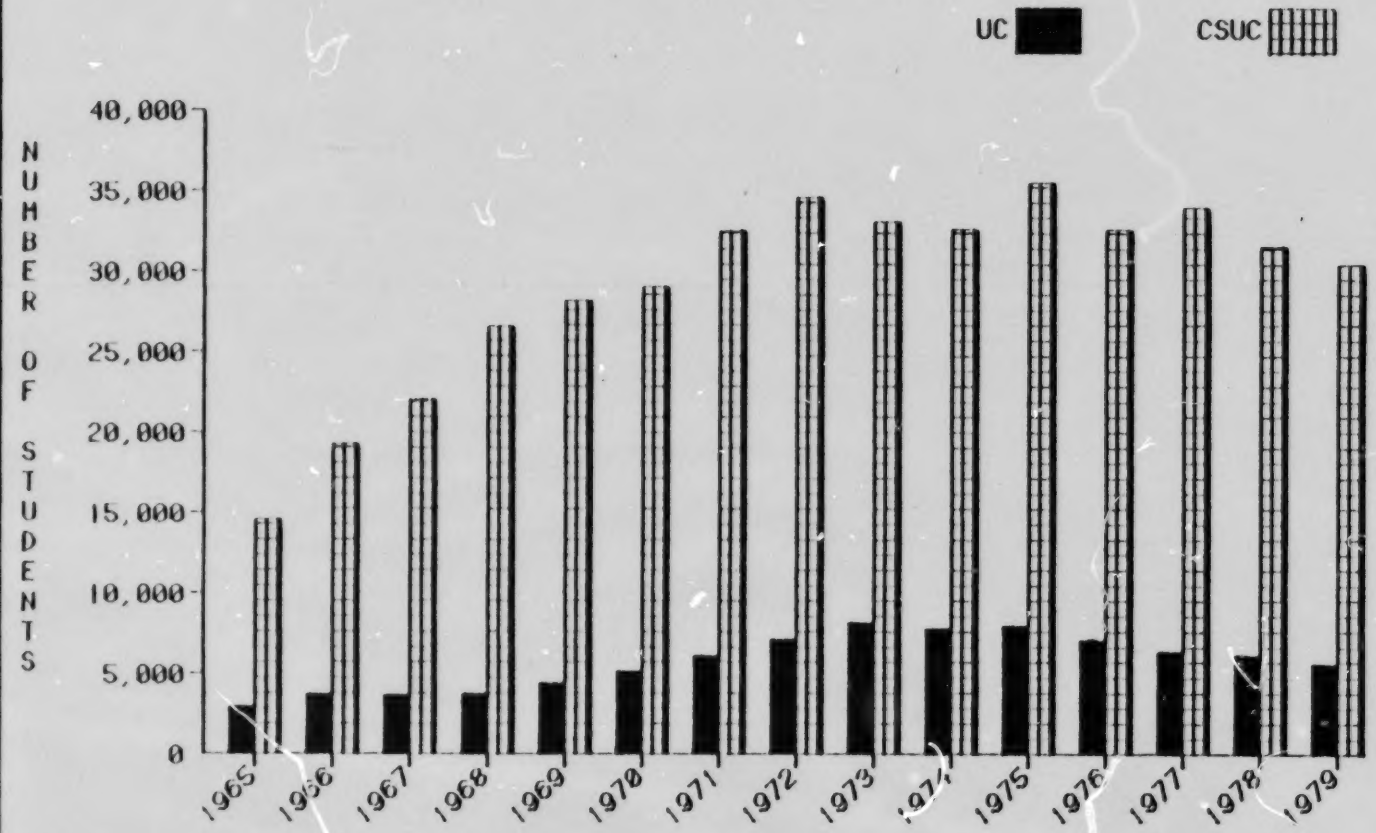
NUMBERS OF COMMUNITY COLLEGE STUDENTS WHO TRANSFERRED TO THE UNIVERSITY OF CALIFORNIA AND THE CALIFORNIA STATE UNIVERSITY AND COLLEGES, 1965-1979, TOGETHER WITH NUMBERS OF FIRST-TIME FRESHMEN FROM CALIFORNIA HIGH SCHOOLS

Year	Community College Transfer Students			First-Time Freshmen	
	Fall Term		Full Year	Fall Term Only	
	UC	CSUC	CSUC	UC	CSUC*
1965	2,948	14,603	--	--	14,023
1966	3,761	19,295	--	12,341	15,574
1967	3,702	22,059	--	13,072	16,082
1968	3,785	26,596	--	11,665	18,844
1969	4,458	28,207	43,963	12,066	17,539
1970	5,166	29,059	49,245	13,233	18,984
1971	6,154	32,546	52,989	13,637	19,306
1972	7,165	34,619	53,820	14,358	22,094
1973	8,193	33,089	51,335	15,011	22,210
1974	7,813	32,646	51,144	14,915	22,886
1975	8,002	35,537	52,917	15,460	23,239
1976	7,123	32,653	51,230	14,935	23,498
1977	6,392	34,001	51,159	14,820	23,867
1978	6,193	31,609	47,430	15,850	24,668
1979	5,654	30,458	--	16,534	25,703

*Fall statistics represent about 90% of first-time freshmen who enter during the full year.

FIGURE 4

NUMBER OF STUDENTS WHO TRANSFERRED FROM
COMMUNITY COLLEGES INTO THE UC AND CSUC SYSTEMS
(FALL TERM ONLY)



transfers. This was slightly less than the overall decrease of 6.0 percent which occurred between 1977 and 1978, when the decrease in University transfers was 3.1 percent and in State University transfers, 6.8 percent. The peak year for transfer to the University was 1973, since which there has been a fairly steady decline in the size of the transfer group. The percentage decline in transfers to the University between 1973 and 1979 was 31.0 percent. The long-term decline in transfers to the State University has been less consistent than for the University, with large numbers of students transferring throughout the year. However, it appears clear that there has been a trend since the mid-1970s toward fewer transfer students from the Community Colleges, while the numbers of first-time freshmen in the University and the State University were increasing. Independent institutions which are members of the Association of Independent California Colleges and Universities indicated that they enrolled more than 2,000 Community College transfer students in 1979, many of whom were continuing, rather than first-time transfer students.

Of the 70 Community College districts, 39 had fewer than 50 students transferring to the University in Fall 1979. Forty-two percent of the University transfer students came from colleges in 8 districts. Some districts with very large credit enrollments produced few University transfers, for example, San Jose, with a credit enrollment of 20,268 in 1979 and 23 University transfers; State Center (Fresno), an enrollment of 17,840 and 42 transfers; and San Mateo, an enrollment of 30,250 and 189 transfers from its three colleges. Proximity to a University campus appears to be only one factor in University transfer rates. The Peralta Colleges, in relatively close proximity to the Berkeley campus, had only 164 students transfer to the University in Fall 1979 when it had a credit enrollment of 33,263. With the number of University transfer students continuing to decline, some Community Colleges may find it difficult to offer the courses that their students need to meet lower division requirements in baccalaureate programs in the University.

At other extreme, 22 of the 70 Community College districts had more than 500 students transfer to the State University in 1979. With the exception of Contra Costa, each of those districts had at least one State University campus in the county in which it is located. Proximity to the transfer institution appears to be an important factor for students transferring to the State University in most parts of the State. For example, 84 percent of the transfer students from the State Center District enrolled at the State University campus in Fresno, and about 80 percent of the transfers from Community Colleges in San Diego County at San Diego State University. Only 6 Community Colleges--all with credit enrollments of less than 3,000 students in Fall 1979--sent fewer than 50 transfer students to the State University that year. Declining numbers of transfer students to the State University should not be a major problem for

the Community Colleges, at least with respect to offering the courses needed for transfer. Unlike the University, the State University now allows the Community Colleges to design and then certify their courses as "baccalaureate level" for transfer to the State University.

Numbers of men and women transferring to the State University were nearly equal in Fall 1979, with only a few hundred more women than men. The University transfer group, on the other hand, contained a significantly higher percentage of men than women--53 percent, men; 47 percent, women.

Ethnicity of Transfer Students--Ethnic distributions of Community College transfer students to the University and the State University are displayed in Table 5, together with the distribution for all full-time Community College students enrolled in Fall 1979.

TABLE 5

ETHNIC DISTRIBUTIONS OF COMMUNITY COLLEGE TRANSFER STUDENTS TO THE UNIVERSITY AND THE STATE UNIVERSITY, COMPARED WITH THAT OF ALL FULL-TIME COMMUNITY COLLEGE STUDENTS
(Fall 1979)

	Type of Students*		
Ethnic Group	Full-time in Community Colleges	Transfer to the University	Transfer to State University
American Indian	1.5%	0.7%	1.6%
Asian	6.9**	8.8	6.6
Filipino	--	1.2	1.8
Black	12.2	3.3	6.8
Hispanic	12.1	7.5	9.7
White	67.3	78.5	73.5
Unknown	0.1	6.8	36.6

*Columns add to 100 percent, exclusive of the "unknown."
**Includes Filipinos.

The latter may be used to make rather gross comparisons since most transfer students were enrolled full time in the Community Colleges. However, the high percentage of transfer students in the State University whose ethnicity was unknown limits the reliability of the findings for the State University. About one-third of the full-time Community College students were reported to be in one of the ethnic minority groups in Fall 1979, compared with 21.5 percent of the University and 26.5 percent of the State University transfer students. Blacks and Hispanics were represented about equally in the group of full-time Community College students, but the percentages of Hispanics in the transfer groups were significantly larger than those obtained for Blacks. However, the percentages for Blacks and Hispanics in both transfer groups were significantly smaller than the percentages in the full-time Community College student groups. The percentage of Asians in the University transfer group was significantly larger than the percentage found for full-time Community College students (which included Filipinos), and also larger than the percentages for other ethnic minorities in the University transfer group. The percentage of Asians in the State University transfer group was also slightly larger than that obtained for full-time Community College students, but smaller than the percentages of Blacks and Hispanics in the State University transfer groups. Since most of the State University "unknowns" with respect to ethnicity were reported by a few campuses in urban areas with large ethnic minority groups, the ethnic distribution of the transfer students to this segment might be somewhat different if complete data were available.

Sex differences were found in the distribution of ethnic minorities in the transfer groups which were similar to those found for first-time freshmen in the University and the State University. Specifically, the percentages of Asian and Hispanic men in the transfer groups were higher than the percentages of women, while the percentages of Black women were higher than the percentages of transfers who were Black men in Fall 1979.

SUMMARY

For each of the three public segments of higher education, the college-going rate for recent graduates of California high schools was higher in Fall 1979 than in 1978. For the University and the State University, the 1979 rate was the highest found for the six-year period, 1974-1979. The Community College rate fluctuated during this period, in part as a likely result of the passage of Proposition 13 in June 1978. It is also possible that some shift of freshmen from the Community College to the University and the State University is taking place among students eligible to attend these institutions as freshmen. The total college-going rate for 1979 was

found to be at least 60 percent, to which must be added the high school graduates who leave the State to attend college and those who enroll in private postsecondary schools, for whom no information is available.

Gains made by women in the late 1970s were significant, particularly in the enrollment of freshmen in the University and the State University. The percentages of male and female high school graduates who enrolled as first-time freshmen in the University were equal for the first time in 1979. For the three public segments combined, the amount by which the percentage of women enrolled as first-time freshmen has exceeded the percentage of men has been increasing during at least the last three years.

Information about the ethnicity of high school graduates and first-time freshmen in public higher education was analyzed as part of the 1979 update of college-going rates. For the three segments combined, the percentages of Asians, Blacks, whites, American Indians, and Filipinos in the ethnic distribution of first-time freshmen were found to be larger than their percentages in the ethnic distribution of high school graduates. The percentages of Hispanics among the first-time freshmen was significantly smaller than their percentages in the ethnic distributions of high school graduates in 1979. In other words, Hispanics were underenrolled in higher education relative to their representation in the group of 1979 high school graduates, while the other ethnic groups were enrolled at least equal to their representation in the distribution of graduates. Significant differences among the segments were found in the ethnic distributions of first-time freshmen. The percentage of Asians in the University distribution was large while the percentages of Blacks and Hispanics were small, compared with their percentages in the distribution of high school graduates. Comparing the three segments, the ethnic distribution of Community College freshmen most closely resembled that found for high school graduates in the same year, with Blacks and Hispanics having higher percentage enrollments in the Community Colleges than in the University and the State University.

The numbers of Community College students who transferred to the University and the State University declined again in 1979, to the lowest numbers in at least a five-year period. The ethnicity of transfer students was analyzed for the first time in 1979. It appears that the college-going behavior of the various ethnic groups at the freshman level was rather similar to that found for transfer students. In other words, the transfer groups had relatively high percentages of Asians and whites, and relatively low percentages of Blacks and Hispanics, compared with the ethnic distribution of all full-time students in the Community Colleges. Sex differences were also similar in the freshman and transfer groups, with relatively higher percentages of Asian and Hispanic men, and Black women.

CONCLUSIONS

There continue to be significant differences among the California counties in both segmental and overall college-going rates, with some increase in differences between 1978 and 1979. However, it is clear that the college-going rates for recent high school graduates are increasing steadily for all public segments, at a time when the number of high school graduates is decreasing. The extent to which freshmen who formerly would have enrolled in a Community College are now enrolling directly in the University or the State University after high school is not clear, although the rates for the latter segments have been rising gradually during the last several years.

Ethnicity data were inadequate in 1979 to draw firm conclusions about segmental and sex differences. There is a need to improve the quality of the data by reducing the percentages of unknown ethnicity before the effects of outreach and student affirmative action programs can be assessed, at least in terms of their impact on college-going rates.

APPENDIX A

Listing by County of California Community Colleges, California State University and Colleges, and University of California Campuses, Together With Selected Independent Institutions

Explanatory Notes

1. The listing is preceded by a California county map which shows the counties in California and the number of institutions in each county.

2. The independent institutions which are listed are general-purpose colleges and universities which admit first-time freshmen, and are candidates for accreditation or accredited by the Western Association of Schools and Colleges.

CALIFORNIA'S 58 COUNTIES*

* Figure within each county denotes number of collegiate institutions

APPENDIX A

Listing by County of California Community Colleges, California State University and Colleges, and University of California Campuses, Together With Selected Independent Institutions

Yuba	Yuba			

APPENDIX B

Percentages of Recent High School Graduates Enrolling in Each Segment of California Higher Education, by County and Year (1974-1979)

Explanatory Notes

1. The percentages are estimates of the college-going rates for recent high school graduates in each of the four segments of California higher education. The percentages were obtained by dividing the numbers of students who were 19 years of age or under when they enrolled as first-time freshmen, by the numbers of high school graduates in June of the same year, for each county and statewide. Both part- and full-time students were included in the computation of the participation rates.

2. Numbers of high school graduates, by county, were obtained from annual reports prepared by the State Department of Education for both public and private high schools.

3. Student data tapes submitted to the Commission annually by the University of California, the California State University and Colleges, and California Community Colleges were the major source of information about the high schools last attended by first-time freshmen. A secondary source was correspondence with Community Colleges which had a high percentage of "unknown" high school codes for first-time freshmen who were recent high school graduates.

   Community College-going rates are judged to be less reliable than those of the University and State University for several reasons, including the high percentage of "unknowns" for several districts. In addition, the rates are confounded by uncertainty about the inclusion of high school dropouts or students who have not yet graduated from high school, or both, all of whom are eligible to enroll in a Community College under certain conditions. Rates which appeared to be highly questionable have been omitted, with the prior year's rate shown instead, in parenthesis.

   For the first time in 1979, first-time freshmen with "unknown" high school codes were found for the University and the State University. They constitute five percent of the University and six percent of the State University freshmen in the analysis, or less than one percent of the high school

graduates. However, the "unknowns" should not be added to the statewide rates for the University and the State University since they may not be graduates of California high schools.

4. Data for independent colleges and universities were obtained by means of a special request for assistance made by the Association of Independent California Colleges and Universities. Seventy (70) percent of the institutions responded with information about the origins of their first-time freshmen. These institutions enrolled more than 85 percent of the first-time freshmen in independent California institutions in 1979.

   Information about the college-going rates in the independent institutions is not wholly comparable to that obtained for the public segments since some institutions could provide only zip codes for their students' home addresses, rather than codes for the high schools from which their students graduated. Furthermore, it was not feasible to limit the first-time freshman group studied to those 19 years and under at entrance. Information for Fall 1978 was used for one institution which was unable to provide data for 1979.

   The following institutions responded with information about the county of origin of their first-time freshmen:

   California Baptist College
   California College of Arts and Crafts
   California Institute of Technology
   California Lutheran College
   Claremont Mens College
   Cogswell College
   College of Holy Names
   College of Notre Dame
   Dominican College
   Fresno Pacific College
   Humphreys College
   Immaculate Heart College
   Loyola-Marymount University
   Marymount Palos Verdes College
   Menlo College
   Mills College
   Mount St. Marys College
   Northrop University
   Occidental College
   Pacific Union College
   Pepperdine University
   Pitzer College
   Point Loma College
   Pomona College
   San Francisco Art Institute
   Scripps College
   Stanford University
   University of La Verne
   University of the Pacific
   University of Redlands
   University of San Francisco
   University of San Diego
   University of Santa Clara
   University of Southern California
   Westmont College
   Whittier College
   Woodbury University

5. Information is arranged so that counties with the largest numbers of high school graduates appear first. No percentages are shown for the seven counties with the smallest numbers of high school graduates since such percentages are unreliable.

APPENDIX B

Percentages of Recent High School Graduates Enrolling
in Each Segment of California Higher Education
by County and Year (1974-1979)

County	Year	Number of H.S. Grads.	Percentage Enrolling as Freshmen in*

*Percents were not calculated for Colusa, Trinity, Modoc, Mariposa, Mono, Sierra, and Alpine Counties because of the small numbers of high school graduates. However, data for these Counties are included in the "Total" figures.

APPENDIX C

Percentages of Men and Women Enrolled as First-Time Freshmen in Each of the Public Segments of California Higher Education, by County and Year (1977 - 1979)

Explanatory Notes

Percentages were obtained for men and women separately beginning in Fall 1977, using data described in Appendix B. Since information about the proportions of male and female graduates from private high schools was incomplete, it was necessary to make estimates for some counties.

APPENDIX C

Percentages of Men and Women Enrolled as First-Time Freshmen in Each of the Public Segments of California Higher Education, by County and Year (1977 - 1979)

County	Sex	Percentage Enrolled As First-Time Freshmen In									Total

APPENDIX D

Ethnic Distribution of 1979 Graduates of Public California High Schools, and First-Time Freshmen at the University of California, the California State University and Colleges, and the California Community Colleges, by County and Sex

Explanatory Notes

1. Rows of percentages in Appendix D add to 100, excluding the column of "Ethnic Data Missing." The numbers in the column to the left of the percentages include students whose ethnicity was not reported. The ethnicity of high school graduates in the various counties may be compared with that of students enrolling as first-time freshmen in Fall 1979 by examining entries in the various columns of percentages.

2. Ethnic data for public high school graduates were obtained from a special report prepared by the State Department of Education. For the Los Angeles Unified School District, the ethnicity of twelfth-grade students was used since data for graduates were not available. Since graduation rates vary among ethnic groups, the percentage of whites among the graduates for Los Angeles County may be underestimated, while the percentages of Blacks and Hispanics may be overestimated.

   Furthermore, ethnic data were not available for some or all graduates of nineteen high school districts, or for about 2.5 percent of all high school graduates in 1979. Santa Barbara and Santa Cruz Counties reported data for fewer than 20 percent of their graduates. Dashes (--) in the "Ethnic Data Missing" column indicate that the ethnicity of all 1979 graduates appears to have been accounted for.

3. Ethnic data for first-time freshmen age 19 and under in each of the three public segments were obtained from student data tapes submitted to the Commission by the segments. In counties where fewer than 50 high school graduates enrolled in the University or the State University, data have been combined for the two sexes or segments, or both. When the total number was less than 50, dashes (--) have been entered for the ethnic minority groups in place of percentages, but with a percentage entered for the majority "white" groups.

4. Attention is called to the high percentage of "Ethnic Data Missing" for State University students in most counties, particularly Sacramento (42 percent), San Mateo (more than 40 percent), San Francisco (about 60 percent), and Stanislaus (about 45 percent).

APPENDIX E

Percentages of High School Graduates Estimated To Be Eligible for Admission to the University of California and the California State University and Colleges as First-Time Freshmen in 1975, Together With College-Going Rates by County

Explanatory Notes

1. Freshman eligibility rates for the University of California and the California State University and Colleges were obtained from the Commission's 1976 study of the eligibility of a 3.5 percent sample of high school graduates in 1975. No percents are shown for thirty-five counties for which fewer than seventy-five graduates were included in the sample studied because of the unreliability of the percents obtained from small samples.

2. No "total eligible" percents were computed since those obtained for the State University are in most cases the same as a total. This is true in that most students who are eligible for the University are also eligible for the State University. All high school graduates are eligible for admission to the Community Colleges, together with nongraduates who can profit from the instruction offered.

3. A new study of eligibility rates is being planned for the June 1981 high school graduates.

APPENDIX E

Percentages of High School Graduates Estimated To Be Eligible for Admission to the University of California and the California State University and Colleges as First-Time Freshmen in 1975, Together With College-Going Rates by County

County	Total Number of High School Graduates	Percent Eligible		Percent Enrolling		
		UC	CSUC	UC	CSUC	Total
Los Angeles	91,048	16%	35%	6.2%	9.2%	15.4%
Orange	27,079	17	39	5.3	7.4	12.7
San Diego	20,412	16	31	5.6	6.0	11.6
Santa Clara	17,829	22	44	5.7	9.2	14.9
Alameda	14,513	13	32	6.9	8.8	15.7

Stanislaus	2,868	7	28	1.2	4.9	6.1

County	Total Number of High School Graduates	Percent Eligible		Percent Enrolling		
		UC	CSUC	UC	CSUC	Total
Tulare	2,654	8%	31%	1.9%	2.9%	4.8%
Solano	2,582	7	24	4.8	4.4	9.2
Santa Cruz	2,156	5	32	3.9	2.8	6.7
35 counties with fewest number of H.S. graduates	22,652	10%	33%	2.5%	6.0%	8.5%
23 counties with largest number of H.S. graduates	271,289	15	35	5.5	7.6	13.1
STATEWIDE TOTAL	293,941	15%	35%	5.3%	7.5%	12.8%

APPENDIX F

Flow of Transfer Students From the California Community Colleges to the University of California and the California State University and Colleges (Fall 1977 - Fall 1979)

Explanatory Notes

1. California Community College enrollments for Fall 1977 and 1978 were obtained from enrollment reports submitted annually to the Department of Finance by the Chancellor's Office.

2. Fall 1977 and 1978 data for the University of California were obtained from enrollment reports submitted by the University to the California Department of Finance.

3. Information for the California State University and Colleges was obtained from Table 9, Undergraduate Transfers from California Community Colleges, published in the Statistical Report Number 8, for 1977 and 1978 Fall Term enrollments.

4. Data for Fall 1979 were obtained from student data tapes submitted to the Commission by the University, the State University, and the Community Colleges.

APPENDIX G

Ethnic Distribution of Community College Transfer Students
to the University of California and the California
State University and Colleges (Fall 1979)

Explanatory Notes

1. Rows of percentages in Appendix G add to 100, excluding the column, "Percent Unknown Ethnicity." The numbers in the column to the left of the percentages include transfer students whose ethnicity was unknown.

2. Data were obtained from student data tapes submitted to the Commission by the University and the State University.

3. When the ethnicity was known for fewer than 50 students in a particular row in the Appendix, dashes (--) have been entered for the ethnic minority groups and the percentage computed only for "white."

4. Community Colleges appear in the Appendix in alphabetical order.

APPENDIX G

ETHNIC DISTRIBUTION OF COMMUNITY COLLEGE TRANSFER STUDENTS TO THE UNIVERSITY OF CALIFORNIA AND THE CALIFORNIA STATE UNIVERSITIES AND COLLEGES
FALL 1979

(in percent)

APPENDIX H

Numbers of Community College Students Who Transferred to the University of California and the California State University and Colleges, 1965-1979, Together With Numbers of First-Time Freshmen

Explanatory Notes

1. Information about numbers of first-time freshmen and transfer students in the State University was obtained from the most recent California State University and Colleges Statistical Abstract (July 1979) and Report 8 of the 1979-80 Statistical Report of the State University, "Origin of 1979 Fall Term Enrollments."

2. Similar information for University of California students through Fall 1973 was obtained from these same sources. Information for subsequent years was obtained from University internal reports and worksheets, except for 1977 and 1978 transfer student data which were obtained from reports submitted by the University to the California Department of Finance, and 1979 data from the student data tape submitted to the Commission.

APPENDIX H

Numbers of Community College Students Who Transferred to the University of California and the California State University and Colleges, 1965-1979, Together With Numbers of First-Time Freshmen from California High Schools

Year	Community College Transfer Students			First-Time Freshmen Fall Term Only	
	Fall Term		Full Year CSUC		
	UC	CSUC		UC	CSUC*
1965	2,948	14,603	--	--	14,023
1966	3,761	19,295	--	12,341	15,574
1967	3,702	22,059	--	13,072	16,082
1968	3,785	26,596	--	11,665	18,844
1969	4,458	28,207	43,963	12,066	17,539
1970	5,166	29,059	49,245	13,233	18,984
1971	6,154	32,546	52,989	13,637	19,306
1972	7,165	34,619	53,820	14,358	22,094
1973	8,193	33,089	51,335	15,011	22,210
1974	7,813	32,646	51,144	14,915	22,886
1975	8,002	35,537	52,917	15,460	23,239
1976	7,123	32,653	51,230	14,935	23,498
1977	6,392	34,001	51,159	14,820	23,867
1978	6,193	31,609	47,430	15,850	24,668
1979	5,654	30,458	--	16,534	25,703

*Fall statistics represent about 90% of first-time freshmen who enter during the full year.
